

AI Tools for Developers

Logo	Tool Name	Brief Description
	GitHub Copilot	GPT-powered code suggestion engine integrated in IDEs.
	Tabnine	AI-driven code autocompletion across many editors.
	Kite	Intelligent code completions and documentation suggestions.
	Codex	OpenAI's programming-oriented language model.
	Sourcegraph	Advanced code search and intelligence across repositories.

	Deepcode	AI-driven static analysis and code review assistant.
	Sourcery	Automated Python refactoring powered by AI.
	IntelliCode	VS Code extension offering context-aware code recommendations.
	Codemagic	CI/CD platform tailored for Flutter app development.
	Jina AI	Neural search and NLP tools for flexible applications.
	Replit	Collaborative coding platform with execution and hosting.

	Zeet	AI-augmented cloud development and deployment environment.
	CodeT5	Transformer-based model designed for code generation.
	Snorkel	ML data labeling system for rapid training dataset creation.
	PolyCoder	Code generation model trained for C programming.
	Retool	Build internal tools quickly with AI assistance.
	Branch.io	Mobile app analytics and deep-linking with AI insights.

	Lobe.ai	Visual tool to build and train ML models without code.
	MetaFlow	Scalable cloud toolkit for managing ML workflows.
	ChatGPT for Devs	Conversational assistant tailored for programming support.
	StackAI	Collaborative coding and debugging powered by AI.
	Pythonic	Python-specific AI that auto-pairs or autocompletes code.
	Mars Ai	AI-powered platform that helps developers rapidly build apps with reusable modules
	AsyncAPI	API framework enriched with AI-powered validation.

	PaddlePaddle	Deep learning framework by Baidu for scalable ML.
	Theia	IDE framework for cloud and desktop with AI extensions.
	AI Dungeon	AI-driven tool to assist in game development/storytelling.
 TensorFlow	TensorFlow.js	JavaScript ML library bringing TensorFlow into the browser.
	KubeFlow	Kubernetes-native platform for deploying ML workloads.
